(b)	3 (A)	"	"	"	C.64; Paris
60	2 ^a (A)	VOT V MVL X in laurel-wreath.	R ⁵	TR	Not in C.; Pearce Pl. II,

54. This type occurs for Valentinian II in the contemporary coinage of Siscia. The present unique coin (2.52 gm.) is light for an *argenteus* and too heavy for a *siliqua*. It may be one of a small issue struck as 'presentation pieces'. Koblitz doubts its genuineness.

56. This is too heavy for a *half-siliqua*, which Sir Arthur Evans thought it might be. The wts. are: 56 (a) 1.3 gm., (b) 1.6 gm., (c) 1.78 gm. Its average weight is certainly below that of the average *siliqua* of the time, and this with its extreme rarity suggests that it also is a 'presentation piece'.

57 (a). In *obv.* legend NP and AV often found ligated, singly or together. A reverse identity joins 57 (a) and (b).

58. SMTR is the mint-mark of the contemporaneous *aes* issue; the rare *siliquae* with this mint-mark must be struck from *aes* dies.

59 (a). In the single specimen seen, AV in *obv.* legend is ligated.
